DEPARTMENT: Application Development
JOB TITLE: Senior Application Development Engineer
REPORTS TO: Director of Application Development

Summary Description:

Design and develop web based healthcare software and provide engineering services for Axolotl customers. Act as a senior resource in overall system design and technical direction, and performing product design and development.

Essential Duties and Responsibilities:

- Achieve an excellent understanding of Axolotl's web based healthcare applications.
- Design and develop new product features, following standard development process.
- Analyze customer requirements and market needs.
- Lead the architecture, design and coding of complex software modules.
- Participate in design, code, and documentation reviews.
- Provide engineering services to customers. Understand their technical requirements and environments; perform technical analyses, design and develop software solutions to address their needs.
- Train and mentor other Software Engineers and Customer Service Engineers on technical topics.
- Troubleshoot and solve customer technical problems raised by Axolotl's technical operations team.

Knowledge, Skills and Abilities:

- Excellent analytical and design skills.
- Thorough understanding of fundamental computer science principles: object-oriented design, structured design, databases, algorithms, data structures, service-oriented architecture (SOA) concepts.
- Thorough technical knowledge in software development methodologies, design and implementation
- Strong web development experience (AJAX, HTML, XML, XSL, CSS, JavaScript, Java, Web Services).
- Excellent documentation, communication, and collaboration skills.
- Ability to work with diverse technologies, independently or as part of a team.
- Excellent follow-through skills; self-motivated and detail-oriented.
- Strong work ethic and desire to grow and develop with the company.
- Bachelor's degree in a technical field, and two or more years as a software engineer.
