

Elysium® EMR Lite

Practices are cutting costs, streamlining workflow, and increasing productivity.

Elysium® EMR Lite is a revolutionary electronic medical record system that focuses on physician workflow and interaction with the healthcare community. It is a solution used by thousands of physicians and staff nationwide - providing, for each practice, a database of consolidated patient data with automated tools like Clinical Messaging®, e-prescribing, ordering, and charting. Physician practices streamline workflow, increase efficiency, and provide improved patient care.

Elysium EMR Lite at Work

Incoming patient data from hospitals, reference labs, and other EMRs get delivered automatically to an electronic clinical inbox. Physicians can review, edit, sign, annotate, assign to staff or forward reports electronically to collaborating physicians and other healthcare organizations in their community. A full-featured e-prescribing module includes interaction checking, refill automation, formulary compliance, and two-way electronic communication with community pharmacies.

With *Elysium*, clinical messages such as lab and radiology results are distributed from hospitals and reference labs, with structured data elements - building patient charts with data that can be easily used to support point-of-care decisions and the care management of a practice's chronically ill patients.

Elysium EMR Lite provides physicians and their staff access to the patient information in their practice – anytime, from anywhere using a browser and a secure Internet connection.

Summary:

- > Interoperable with other practices using EMRs, hospitals and reference labs, public health departments and pharmacies
- > Integrated with *Elysium Community Virtual Health Records*
- > Clinical Messaging - secure electronic communication

Key Features:

- **Continuity of Care Records (CCR)**
- **Clinical Decision Support**
- **Eligibility Verification**
- **Health Maintenance**
- **Mobile (PDA) Solution**
- **Referral Management**
- **Document Generation**
- **e-Prescribing**
- **Lab Ordering**
- **Radiology Ordering**
- **Results Reporting**
- **Encounter Recording**
- **Security**
- **Workflow Automation**
- **Alerts**
