

Elysium[®] Transcription Services

Quality | On Time | 100% US-based

Axolotl Corp. is the leader in Health Information Exchange, creating Clinical Networks across your region and state, which enable fast and efficient sharing of patient data between hospitals and physicians.

Transcribed reports are one of the most important pieces of information in a patient's chart. You need to ensure the efficient creation, distribution, and management of these reports, as well as making sure they are accurate and completed cost effectively. Axolotl provides quality, 100% US-based transcription services, and so much more...

A Complete Transcription Solution

Selecting the right transcription provider is an important decision that can positively impact your entire organization. Partnering with Axolotl will not only streamline HIM operations with high quality reports and dependable turnaround times—it will literally simplify the complete transcription process—from dictation to authentication to distribution.

Quality Service...Great Value

Axolotl is committed to providing the highest quality service in the industry. Using a combination of skilled 100% US-based Medical Transcriptionists, highly qualified QA staff, and state-of-the-art technology, Axolotl surpasses industry standards for accuracy on all transcribed documents—cost effectively. All internal reviewing, editing, and QA standards follow the AAMT Book of Style, and all turnaround time commitments are stringently monitored.

Real Time Cost and Performance Monitoring

We believe our customers have the right to measure the cost and performance of their transcription service provider. Axolotl conforms to the open billing principles established by MTIA, providing customers with the ability to view and confirm the cost of each report, on-line, at any time. HIM managers are equipped with an easy-to-use, browser-based accounting view of all delivered reports. Reports can be sorted by physician and work-type, allowing utilization, turnaround time and cost to be analyzed and aggregated by day, month or year.

Better Report Management

Accessing transcribed reports and tracking their status has never been easier. Whether newly dictated, delivered, or in process, status information on all reports is available through a single, easy-to-use system called the Elysium Report Manager. HIM staff can immediately determine which reports have been printed, are in the queue, or are still awaiting approval. Dictation time, report type, requested turnaround time, and other details are viewable for every report.

Accelerate the Billing Cycle

Axolotl's approval capability allows physicians to review, edit and electronically approve reports on-line as soon as they are available. HIM staff can review reports that are awaiting physician authentication, improving regulatory compliance.

Expedite Reimbursement

The HIM department may grant other hospital personnel access to complete reports, further reducing chart pulls and eliminating the time and risks associated with transporting documents. Patient billing and accounting departments can view reports concurrently, and coding and billing employees can process information on-line, as soon as it is available, expediting reimbursement.

Health Information Exchange

As physicians continue to adopt electronic medical records, the need for delivery into those systems will prevail. With Elysium, reports are delivered automatically into HIS and EMR systems. And, for physicians not yet using an EMR, Axolotl's EMR Lite

provides them with convenient online access, management, and signature capabilities. Further, clinicians can communicate electronically using Clinical Messaging®, ePrescribing and ordering—all this, for less than monthly cable TV service. Finally, each report is populated with discrete data elements that EMR and HIS systems can use to provide better patient care.

Automated Printing and Distribution

For physicians not yet electronically connected, HIM staff can print completed reports automatically, individually or in batches—and can schedule print times as necessary. Reports can be sorted by physician, patient name, or medical record number and printed in the appropriate department.

Secure and Reliable

Elysium Transcription Services are fully compliant with HIPAA's need-to-know requirements and ensure secure data access. Receipt of transcribed reports is guaranteed and lost results are eliminated. Additionally, our systems are hosted at a world-class facility that controls physical access with state-of-the-art biometric security which, together with robust redundancy and back-up procedures, guarantees the safety and accessibility of all data.

Axlotl has been a trusted software and service supplier since 1995. Our high quality, cost effective and reliable transcription services not only accomplish your HIM goals—but serve the needs of your community, making patient data available when and where it is needed. **It's time** to find out what Axlotl is doing in your region and how you can benefit.
